

directQuarantine for Outlook

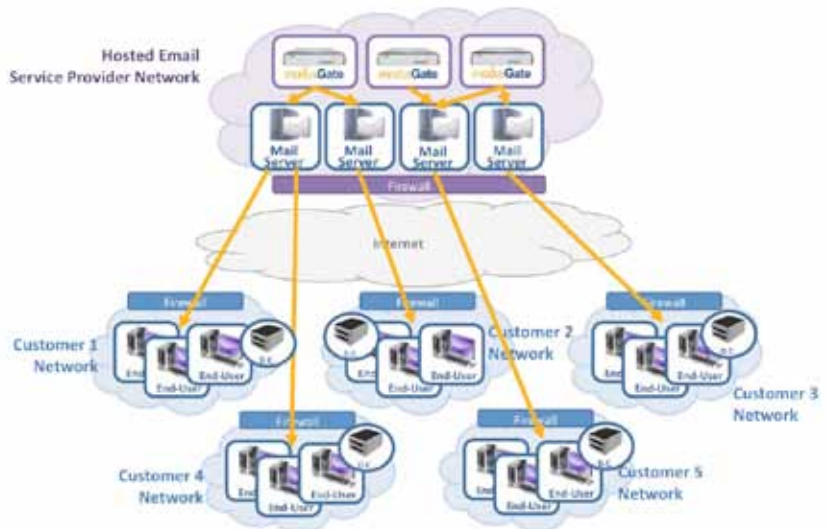

Deployment scenarios for Service Providers

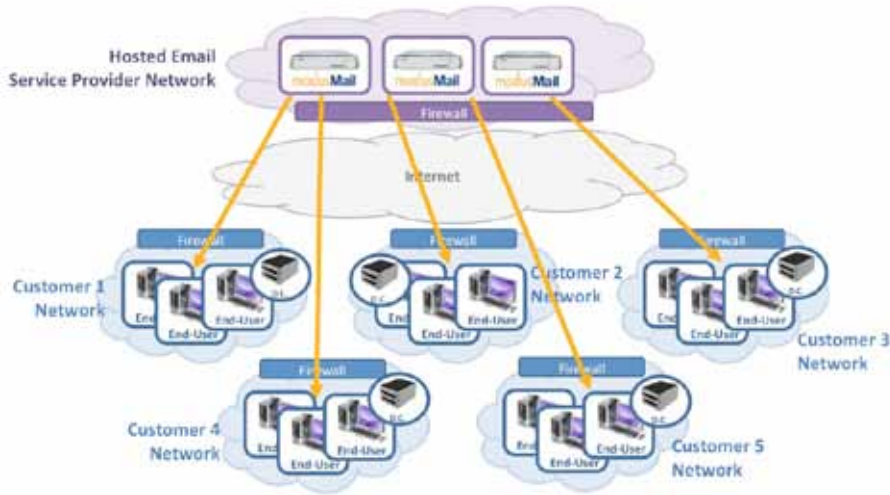

Hosted Email Security (modusGate)

This is a hosted email security scenario using modusGate, where the email server is located on the customer's premise.

This is a hosted email and email security scenario using modusGate and a mail server, where the mail server could be modusMail, Exchange, or any other mail server that supports Active Directory.

Hosted Email & Email Security

This is a hosted email and email security scenario using modusMail.

Hosted Email Security (modusMail)

Installation of directQuarantine

The directQuarantine installation is composed of two parts: the server and client applications. Note that the client network must have its own Active Directory/Domain Controller server. Without this, directQuarantine will not work.

The directQuarantine client can either be pushed to the end-users machines using a GPO, or by manually installing the file on the individual machines. It is recommended to deploy the directQuarantine client on a single machine first in order to test the installation and connectivity. Once it is successful, deploy it to multiple machines.
